

Date	Start	Finish	Time	Task	Notes
1/3/2025	19:30	21:30	2.0	LOGIC	Initial design creation. One of the problems I had in the previous project was disorganization, so I thought it would be a good idea to start with a sketch in Excalidraw and build step by step, component by component. With the JavaScript course completed, I want to prioritize file organization and communication between them, aside from making the application functional. Therefore, we will first build the interface and then add interactivity.
4/3/2025	10:00	12:00	2.0	HTML	Create the HTML for the "Add an Order" button. Start applying styles.
5/3/2025	13:00	17:00	4.0	CSS + JS	I begin implementing the application's functionalities, building a lot in a "short time" and understanding the logic of what we are going to do. I suggest reviewing the logic before moving forward.
6/3/2025	10:00	13:00	3.0	JS	Start building the app with Classes and methods for more clarity.
10/3/2025	15:00	19:00	4.0	JS	Difficult to code in my current situation. Keep building the JS so everything runs in the background.
11/3/2025	8:00	10:00	2.0	HTML + CSS	Build the Home page.
12/3/2025	8:00	9:00	1.0	HTML + JS	Add datalist with database to "Ticker" in Add Order
12/3/2025	9:00	12:00	3.0	HTML + CSS	Continue building the Home page. Add Wallet and Orders only to see three of these.
13/3/2025	8:00	12:00	4.0	HTML + CSS	Finish the Home page (hardcoded) and start building the Wallet page.
14/3/2025	8:00	10:00	2.0	HTML + CSS	Finish the Wallet page (using static data). I'm leaving the JavaScript for the end. First, I want to check that the page styles are good. I'll do the graphs at the end too.
17/3/2025	8:00	9:00	1.0	HTML + CSS	Finish the Order page (using static data).
17/3/2025	9:00	12:00	3.0	JS	Start connect pages with the JS. Start to replace static data.
17/3/2025	16:00	20:00	4.0	JS	Replace static data on the Home page.
22/3/2025	10:00	12:00	2.0	HTML + CSS	Add a modal to add a new Ticker with the Name when the ticker doesn't exist. Also, add a clear button to clear the wallet and the orders.
22/3/2025	14:00	16:00	2.0	JS	Finish the Home Page. Only the chart is missing.
22/3/2025	18:00	20:00	2.0	JS	Add WalletPage.js and manipulate the Database. Organize files.
23/3/2025	10:00	12:00	2.0	HTML + CSS	Edit and finish the form to add a new investment. I was edit the three html archivos que tenemos creados.
23/3/2025	12:00	16:00	4.0	JS	Finish developing Sell JS. At this point, the project is almost finished. All that's left is to complete the wallet and orders pages, and create the performance metrics (which is data we've already generated; we just need to add them). We'll also leave the graphics for last.
26/4/2025	20:30	21:30	1.0	JS	Fix (close) modal when submit an order and start build ActualizeWalletPage.js
30/4/2025	10:00	11:00	1.0	HTML + CSS	Build filter section desing, modals to filter the category, name, cost, etc.

30/4/2025	15:00	18:00	3.0	JS	Build method to filter and order the options in the modal that open when we make hover in the filter svg right to Wallet title
5/4/2025	10:00	13:00	3.0	JS	Start to build OrdersPage.js. This page is somewhat similar to WalletPage, so we're reusing some code. I think there might be a way to reduce the code and avoid repetition. Although they are similar, they are not identical, so I'm not entirely sure how to do it. We also decided to separate purchase and sale orders into two tables. This allows us to add the 'profits' column to the sales orders table.
5/4/2025	14:00	16:00	2.0	HTML + CSS	Rebuild and redesign orders.html.
6/4/2025	18:00	21:00	3.0	JS	Modal addOrder and Backend fixed: - Maximum units when switching from sell to buy: Fixed error when changing between order types. - Calculation with 0 units and order saving: Prevented NaN error and handling of orders with 0 units. - Fully sold investments disappear from the sell list: List updated when selling everything. - Removal from wallet after total sale and persistence in orders: Investment disappears from the wallet (frontend) but remains in the order history. - Save new currency name with initial capital letter: Implemented automatic capitalization. OrdersPage.js: - Empty table in ORDERS: Fixed error that displayed an empty table. - Color in positive and negative sell orders: Added color to distinguish profits and losses.
10/4/2025	19:00	21:00	2.0	JS	Add Cost and P / L to the filter options in Order page. Update wallet + actualizeOrdersPage. When selling, the total cost is not calculated correctly, and price is also incorrect.
13/4/2025	10:00	13:00	3.0	JS	I started creating the function to be able to edit the orders. This took a little longer than expected because I was tweaking things along the way, making small errors and corrections.
14/4/2025	10:00	12:00	2.0	JS	Continue with Order Edit mode, set up the wallet when modifying an order.
15/4/2025	10:00	12:00	2.0	JS	- Fix error when clicking on the SVG. - Fix the wallet functionality to display percentages upon modification. - Add the functionality to delete orders.
17/4/2025	10:00	12:00	2.0	JS	- Fix input units max when i want edit an order.
24/4/2025	18:00	20:30	2.5	JS	Learn about Chart.js. I think that it will take me a little more time than I thought.
25/4/2025	17:00	19:30	2.5	JS	- When canceling orders from the "clear wallet", the orders are removed from the page but still remain in the local storage.
30/4/2025	14:30	18:30	4.0	JS	- The new currency is not being added to the list in the buy order modal. Fixed. - Value and Cost in Wallet -> Others is not working. Fixed. - Deleting a sale is not restored in Wallet. Fixed. - Homepage broke when add an Order. Fixed.

1/5/2025	19:00	21:00	2.0	TEST	Testing app before create charts and fix some little errors.
2/5/2025	10:00	12:30	2.5	JS	I've started building the charts on the Home Page. It's currently just a sketch (or draft). I need to improve the code and apply classes.
3/5/2025	14:00	16:00	2.0	HTML + CSS	<ul style="list-style-type: none"> - Edit/Refine some functionality. - Finish and improve the charts on the Home Page (currently a sketch/draft, needs code refinement and styling). - Implement showing instructions on the Home Page when the wallet is empty.
5/5/2025	14:00	16:00	2.0	HTML + CSS + JS	Fix. Entering units before the ticker when selling causes a crash. Require ticker input first. Fix. Tables are broken in responsive view on mobile. Make tables fully responsive for mobile.
5/5/2025	16:00	20:00	4.0	JS	<ul style="list-style-type: none"> - Fix submit reload on Home Page. - Fix name and crash newCurrencie.
6/5/2025	14:00	20:00	6.0	JS	Build charts (with Classes) in Wallet and Order pages.
6/5/2025	14:00	18:00	4.0	JS	Finish build charts. Finish page. All that's left is to complete the READ.me and give the classes an order.
6/5/2025	22:00	0:00	2.0	JS	I finalized the project. I fixed minor bugs, adjusted the class names, and completed the READ.me
